

## HPLC Method for Analysis of 10A Oligonucleotides on OligoMg Column by SIELC Technologies

Separation type: Bridge Ion Separation Technology, or BIST™ by SIELC Technologies

Research and Studies :

Medical and Diagnostic Applications :

Educational Purposes :

Demonstrating basic principles of nucleic acid chemistry and genetics.

In DNA nanotechnology, specific sequences of DNA are used to form structures and shapes at the nanoscale. A poly(A) sequence might be part of a larger structure.

Using SIELC's newly introduced BIST™ method, this oligonucleotide can be retained on a OligoMg column. Using this new and unique analysis method, oligonucleotide can be separated, retained, and detected at 260 nm.

Please read more on oligonucleotides analysis by HPLC in our June 2024 newsletter .

## Method Parameters

|                     |  |
|---------------------|--|
| <b>Column</b>       | OligoMg, 4.6 x 100 mm, 3 µm, 100 Å, dual ended |
| <b>Mobile Phase</b> | Gradient MeCN70-45%, 10 min                    |
| <b>Buffer</b>       | none   |
| <b>Flow Rate</b>    | 1.0 mL/min                                     |
| <b>Detection</b>    | UV 260 nm                                      |
